

System solution incineration technology

Complete solution in the field of combustion technology

SYSTEM SOLUTION INCINERATION TECHNOLOGY

Solution	- Complete solution in the field of combustion technology
Application	- For all new plants in the field of thermal waste treatment
System	- System solution from waste feeding to deslagging
Advantages	<ul style="list-style-type: none"> - Segmental construction - Corrosion- and wear-resistant materials - High serviceability - All-in-one-solutions - Coordinated components - Long travel time of the individual components - System adaptations according to customer requirements

EnergieLink Plant Engineering and Solutions

We are your reliable partner with an innovative approach. EnergieLink is a young, dynamic company with a good mix of employees with many years of experience in the engineering industry and talented young engineers. This ensures that we design our products on the basis of proven materials, designs and specifications, constantly refining them using innovative methods and, hence, creating pioneering and service-friendly technologies.

We consider our customers as our partners, and we offer them flexible end-to-end solutions, taking their needs into account at all times.

Complete solution in the field of combustion technology

As a full-service provider, we offer our components as complete solutions in combustion technology. Our products are the result of our service activities in new and existing plants and have already been installed in many plants. This gives us the advantage of knowing the challenges after an operation time of several years and of being able to optimize our systems for a long service time. From the waste feed to the de-slagging systems, our parts and components are designed for reliability, efficiency and easy maintenance. We lay emphasis on replaceable individual components in order to avoid cost-intensive replacements of complete assemblies during the operation of the entire system. These are well thought-out, economical and user-friendly products that deliver outstanding performance, in particular when used in combination together.
